

ELECTRIC PIPELINE COMPRESSION

MORE PRESSURE AND EFFICIENCY WITH ZERO EMISSIONS

EPA RECOMMENDED | REDUCED MAINTENANCE | LOWER CAPITAL COSTS | LOCATION FLEXIBILITY

ZERO EMISSIONS
means reduced
regulation and
permitting.

Location flexibility: move
stations away from people and
near high-voltage power.

AEP works to power a brighter future for our customers and communities. Today's electrically driven compressors replace aging, problem-prone gas compressors with higher-pressure efficiency, more productivity with fewer compressors, and little or no maintenance—and the emissions-free performance recommended by the EPA.
